

QUARTERLY ACTIVITIES REPORT TO 30 Sept 2019

Peninsula Mines Limited (“Peninsula” or “the Company”) has a long-term vision for strategically linking upstream flake graphite supply and downstream graphite processing in the Korean peninsula’s battery industry.

Highlights

-  Peninsula announced in July that a **merger** was underway to combine its South Korean graphite projects with those of Battery Mineral Resources Limited (BMR). Negotiations remain on-going with BMR with regard to the conclusion of the agreement. ^{D1}
-  During the Quarter, PSM secured Korean Resources Corporation (**KORES**) drill funding to enable diamond drilling of three holes for 340m, to confirm the interpreted synformal structure. The results of the drill program are included below. ^{D3}
-  Field work continues through channel sampling and metallurgical analysis.

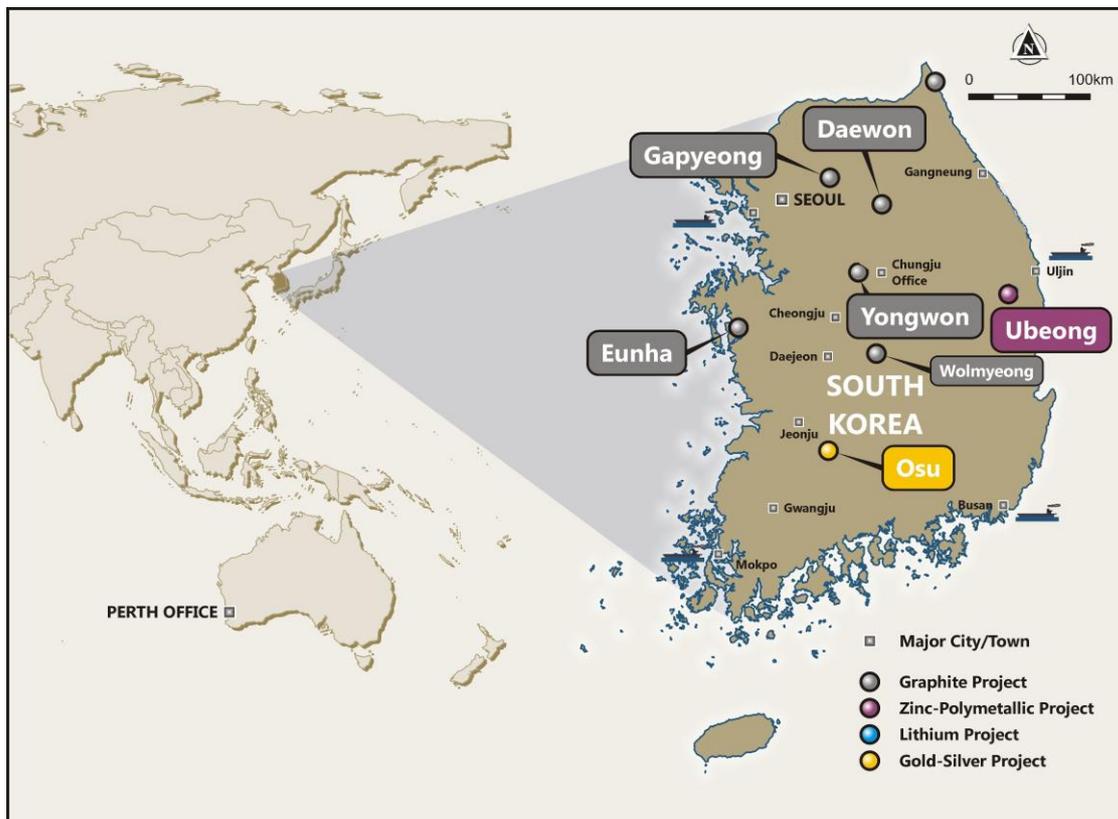

Figure 1: Peninsula Mines’ South Korean Project Locations

Graphite Business Development

During the Quarter, Peninsula announced the merger of its wholly owned Korean subsidiary, Korean Graphite Company Limited (KGCL), with the Korean branch of Battery Mineral Resources Limited (BMRK)

to form a new company, 45% PSM and 55% BMR owned. This will enable both companies to maximise their strategic advantage, applying Peninsula's operational expertise to BMRK's more advanced project. ^{D1} Changes to the corporate management within BMR has led to unforeseen delays in completing the merger, however, the process is continuing.

Flake Graphite Projects

KGCL flake graphite projects, namely Gapyeong, Yongwon and Daewon, continue to be progressed on the following basis:

-  Each project has flake graphitic units mapped over a strike of more than 1km and approximately 10m wide
-  Metallurgical and petrographic analysis confirmed the suitability of the flake graphite for spherical graphite production
-  Each has undergone detailed ground electromagnetic (EM) surveys and trenching.

Exploration targets have been defined for Gapyeong, Yongwon and Eunha Projects, with resource diamond drilling having so far been conducted at Gapyeong (Q3, 2019) and Eunha (Q3, 2018). Drilling access negotiations continue for Daewon and Yongwon.

Gapyeong Flake Graphite Project

Peninsula's Gapyeong Project, located 50km east of Seoul, includes flake-graphite mineralised marble units defined by ground electromagnetic (EM) surveys, surface mapping and sampling, as well as diamond drilling and trenching.

During the quarter, 3 further drill holes were drilled to test the southern extent of the Gapyeong structure at 4180500mN, 4180430mN and 4180370mN. Drilling on the northern two sections has identified two deeper graphitic horizons. These included intercepts of 1.98m (1.8m true width (TW)) at 4.1% TGC from hole GPD0007 and 2.95m (2.0m TW) at 9.8 TGC% & 2.55m (1.8m TW) at 5.9% TGC from hole GPD0008. The significant intercepts are summarised in Table 1 and a full list of assays and a summary of the geology and hole location details are contained in the appendices. The drilling confirmed the northerly plunge to the Gapyeong synform with the keel of the main graphite horizon daylighting just south of the southernmost trench on 4180400mN section.

The drill programme was supported by KORES who provided direct funding towards the cost of the drilling and met approximately 50% of the overall cost of the drill programme. All three holes were extended beyond their original planned depth with a total 397m of drilling completed.

The southernmost hole on section 4180370mN passed below the keel of the interpreted synform and failed to intersect any graphite mineralisation.

The 2019 drill programme was designed to test the southern extent of the Gapyeong structure and to identify the depth extent of the main synformal fold structure that was previously sampled in the 2018 surface trenching programme^{D2,3}.

The graphite mineralisation occurs within a skarnified limestone sequence. In both holes, a number of faults were observed that have disrupted the easterly dipping graphite horizons and have caused a series of fault repeats of the two deeper graphitic horizons (see cross sections Figures 2 & 3).

Graphite mineralisation has now been confirmed by drilling and surface trenching between sections 4180400mN and 4180760mN. Additional outcrops have recently been identified further to the north on and south of section 4181130mN. These outcrops lie on the company's adjacent Gapyeong 124-4 tenement where the graphite structure is offset to the east across the southwest-northeast trending Geumdaeri Fault (Figure 1). The Gapyeong Graphite Project is located 50km east of Seoul in South Korea (Figure 1, inset, for location).

Eunha Flake Graphite Project

No further work was undertaken during the quarter

Daewon and Yongwon Flake Graphite Projects

Drill access arrangements are still under negotiation. Again, further work is planned.

Wolmyeong Graphite Project

The Wolmyeong amorphous graphite deposit, formerly the largest graphite mine in Korea, has significant potential to supply the Korean steel industry. A more detailed review of the Wolmyeong project and its potential is underway.

Ubeong Zinc-Lead-Copper Project

Historically mined, mineralised skarn near the active Keumho Zinc-Lead Mine had seen no systematic, modern exploration prior to Peninsula securing the Project. Peninsula's work has included detailed mapping, ground magnetic surveys, induced polarisation (IP), systematic soil sampling and diamond drilling to define exploration targets.

The compiled results, including historic Korea Mineral Promotion Corporation (KMPC now KORES) drill intercepts of **7.0m (4.0m TW) @ 14.58% Zn, 1.37% Pb and 2.12% Cu** from Ilweol in the Project's south. The high-grade base metal mineralisation is associated with pyrrhotite and these high-grade zones appear as magnetic highs along the northwest-southeast trending locally skarnified Ilweol structure. Peninsula is seeking a JV partner to advance the Ubeong Project while the company focuses on its core graphite business. ^{D4}

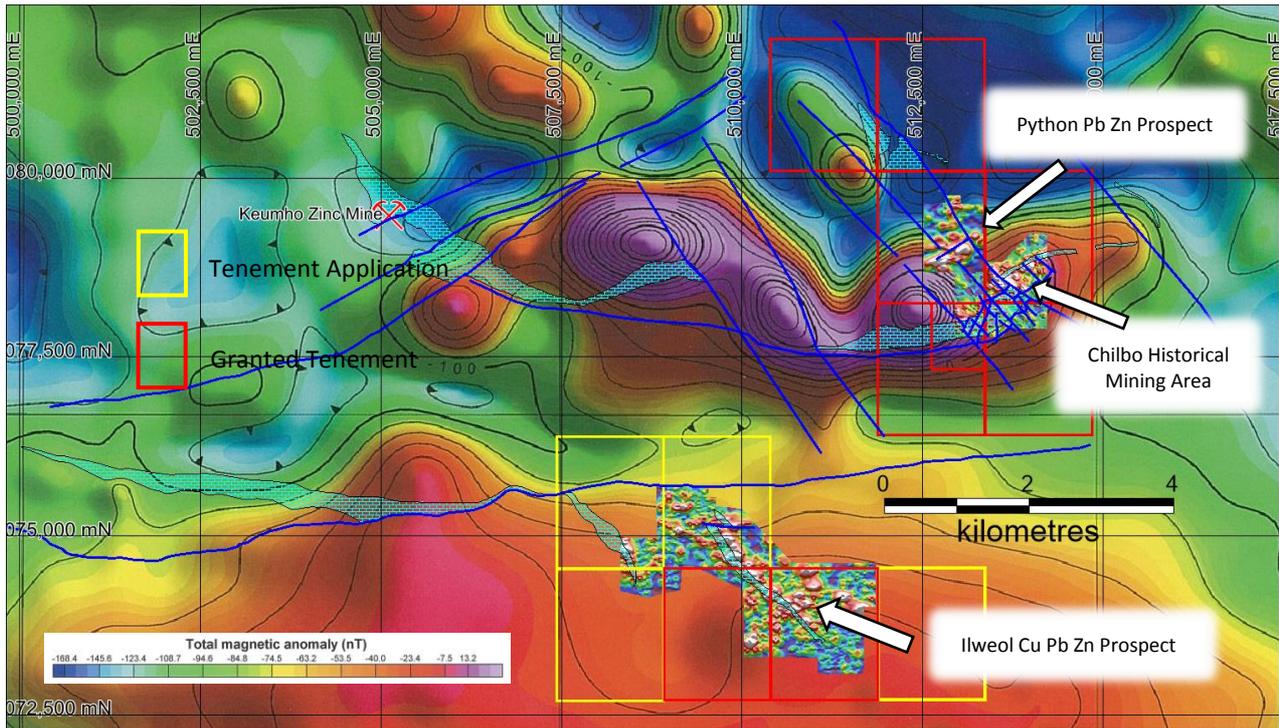

Figure 3: Ubeong Project TMI detailed ground magnetics imagery over TMI regional aeromagnetics, mapped skarn-limestone and structural geology, tenements, and rock chip and soil sampling^{D4}

Osu Gold Project

A number of historical underground mines on the flanks of Mount Palgong historically exploited a mineralised zone over 1.2km strike. Peninsula has secured the ground and conducted diamond drilling below the historical workings (completed Q4 2018) and trenching across the 30m wide surface expression of mineralised sheet veining. This work has confirmed the continuity of the high-grade gold-silver mineralisation both at surface and at depth. The Company is looking to farm out the Project to further develop this exciting gold-silver play with potential porphyry at depth.

Corporate

Peninsula's operating expenditure during the Quarter was \$474k, including approximately 55% exploration and development costs. Administration costs included a significant component devoted to capital raising activities.

The company retained \$171k cash at bank at the end of the year with no debt.

Forward Looking Statements

This report contains certain forward-looking statements. These forward-looking statements are not historical facts but rather are based on Peninsula Mines Ltd.'s current expectations, estimates and projections about the industry in which Peninsula Mines Ltd operates, and beliefs and assumptions regarding Peninsula Mines Ltd.'s future performance. Words such as "anticipates", "expects", "intends", "plans", "believes", "seeks", "estimates" "potential" and similar expressions are intended to identify forward-looking statements. These statements are not guarantees of future performance and are subject to known and unknown risks, uncertainties and other factors, some of which are beyond the control of Peninsula Mines Ltd, are difficult to predict and could cause actual results to differ materially from those expressed or forecasted in the forward-looking statements. Peninsula Mines Ltd cautions shareholders and prospective shareholders not to place undue reliance on these forward-looking statements, which reflect the view of Peninsula Mines Ltd only as of the date of this report. The forward-looking statements made in this report relate only to events as of the date on which the statements are made. Peninsula Mines Ltd does not undertake any obligation to report publicly any revisions or updates to these forward-looking statements to reflect events, circumstances or unanticipated events occurring after the date of this report except as required by law or by any appropriate regulatory authority.

Competent Persons Statements

The information in this report that relates to Exploration Results, Mineral Resources or Ore Reserves is based on information compiled by Mr Daniel Noonan, a Member of the Australian Institute of Mining and Metallurgy. Mr Noonan is an Executive Director of the Company.

Mr Noonan has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Noonan consents to the inclusion in the report of the matters based on this information in the form and context in which it appears.

The information in this release that relates to Geophysical Results and Interpretations is based on information compiled by Karen Gilgallon, Principal Geophysicist at Southern Geoscience Consultants. Karen Gilgallon is a Member of the Australasian Institute of Geoscientists (AIG) and has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Karen Gilgallon has previously consented to the inclusion in the release of the matters based on this information in the form and context in which it appears.

Notes

1. The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity that wishes to disclose additional information is encouraged to do so, in a note or notes included in or attached to this report.
2. If this quarterly report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, AASB 6: Exploration for and Evaluation of Mineral Resources and AASB 107: Statement of Cash Flows apply to this report. If this quarterly report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
